SARS-CoV-2 (COVID-19) - 2020

Stockholm, 15 November 2020

Disclaimer: These tables, histograms, maps and graphs are based on the available information at the time of publication, originating from several sources. Data completeness depends on the availability of information from the affected areas. All data should be interpreted with caution as the outbreak is evolving rapidly. In addition, due to the unavailability of date-of-onset data and different testing policies per country, these figures might not be reflective of the evolution of the epidemic.

Interpretation of the data

14-day notification rates and trends are collected using epidemic intelligence from various sources and are affected by the testing strategy, laboratory capacity and the effectiveness of surveillance systems.

As all of these factors can differ greatly between countries, ECDC does not recommend using notification rates to directly compare countries. Particular caution is needed when interpreting reported rates from areas with small populations where small changes in numbers of reported cases can have a big impact on the notification rate.

In addition, retrospective adjustment of data by reporting authorities is possible. Negative counts of new cases can arise if countries or subnational areas report cumulative totals that are lower than those reported previously, which can affect the presentation of data in maps and time-series plots.

Distribution of COVID-19 cases in accordance with the applied case definitions in the affected countries by country, Africa, as of 15 November 2020

Places reporting cases	Cumulative cases	Cumulative deaths
Algeria	66 819	2 139

Disclaimers

National updates are published at different times and in different time zones. This, and the time ECDC needs to process these data, may lead to discrepancies between the national numbers and the numbers published by ECDC. Users are advised to use all data with caution and awareness of their limitations. Data are subject to retrospective corrections; corrected datasets are released as soon as processing of updated national data has been completed.

Belgium: On week 25-2020, Belgium authorities slightly modified the reporting in order to report the COVID-19 cases by date of sampling or diagnosis, and deaths by date of death. The earliest available date is used and might be changed as new information becomes available.

China: As of 13/02/2020, number reported from China include all suspected cases with a clinical diagnosis of pneumonia (not necessarily laboratory confirmed as having COVID-19). Numbers of cases are plotted by date of reporting.

France: On 7 May, France reported an increase over 3 200 cases. This increase is due to the addition of new laboratories who transmitted retrospective positive tests (since 16 March 2020). In addition, on 13 May there was a significant change in the French surveillance of lab confirmed COVID-19 cases and virtually all laboratories in France are now included in the system. Cases from this new system were reported on 29 May. The increase in cases in the dashboard on 29 May therefore does not reflect increased incidence of COVID-19 cases, but an improved comprehensiveness of the surveillance system.

Ireland: Between 05/04/2020 – 19/04/2020, the daily number of confirmed COVID-19 cases reported in Ireland is inflated due to batch reporting of cases with specimen dates between from 19/03/2020 – 01/04/2020 in addition to real-time reporting of cases with contemporaneous specimen dates. On 2 October 2020, authorities in Ireland retrocorrected the total number of COVID-19 deaths leading to a negative value for the deaths reported on 3 October 2020.

Disclaimers

Luxembourg:As of 24 August 2020, authorities in Luxembourg report COVID-19 cases and deaths from their resident population only. Therefore, the difference with the figure from 27 August is translated into a negative value for the cases and deaths reported on 28 August 2020.

Mexico:As of 6 October 2020, according to Mexican Public Health Authorities, the cumulative numbers of cases and deaths have increased significantly compared to the previous days due to a late publication of data.

Kosovo:This designation is without prejudice to positions on status, and is in line with UNSCR 1244/1999 and the ICJ Opinion on the Kosovo declaration of independence.

Kyrgyzstan:On 17 July 2020, Kyrgyzstan changed their registration statistics on COVID-19 by introducing two codes (laboratory confirmed cases and clinical-epidemiological cases). This leads to a significant increase in case and death numbers on 18 July 2020.

Monaco:From 24 August, Monaco only reported figures among residents resulting in a drop in cases and deaths.

Disclaimers

Sweden: From end of August 2020, Swedish authorities are performing daily data consolidation leading to data retro-corrections. From week 38, the Swedish Public Health Agency will update COVID-19 daily data four times per week on Tuesday–Friday. This can result in a decrease of cumulative figures (cases or deaths) and related outputs.

United Kingdom: On 10 August 2020, the United Kingdom reported less cumulative deaths in the United Kingdom. This is due to revisions in historical data. On 13 August 2020, the United Kingdom did not report cumulative cases and deaths due to technical difficulties. Data will be updated as soon as it is made available. From 3 October 2020, due to a technical issue, COVID-19 cases from 24 September to 1 October will be reported by British authorities in the coming days.

Due to the reporting delay in Belgium, Spain and Sweden the 14-day period for these countries is provided with one day delay e.g. the period 27/08/2020-02/09/2020 should be read 26/08/2020-01/09/2020.
