Dag [redacted]

Heb zojuist overleg gehad en wat ik kan zeggen is dit: er wordt door [redacted] en andere engineers hard gewerkt aan een 'work around' voor het testen nu 13.7 uit is. Ze zijn nu zelf het zgn side loading aan het controleren.

[redacted] zal uiterlijk morgenmiddag met jullie contact opnemen om de situatie (en als het goed is ook oplossingen) door te nemen.

In het kader van transparantie: deze situatie speelt ook in UK, Polen en Duitsland dus het spreekt voor zich dat dit onze volledige toewijding heeft.

Hartelijke groet,

[redacted]

**Onderwerp:** CononaMelder - Urgent request

Dear [redacted]

On September 2nd we delivered a new set of public keys for Apple to get installed. This, because we need to integrate the Hardware Security Module (HSM) which uses a new private key / public key combination before we can formally launch the Dutch CoronaMelder app to the public.

This is on the critical path for the public release of the CoronaMelder app and we are now awaiting approval and activation of the key at Apple.

Can I ask you to support us in getting this done as soon as possible, preferably today or tomorrow?

Warm regard,

[redacted]

[redacted]

Onderwerp: RE: new public key for Test environment

Hi 5.1.2e

Sadly enough we discovered an error in the sig/bin file combination that we delivered last Saturday. The binfile contained a v10 version number and of course that was not the purpose. It should have been v13 like we communicated.

To make sure things will go ok, we deliver here a new zipfile which contains again the same public key as well as the new sig/bin combination with the right v13 versionnumber in it. See the attachment.

The parameters stay as we communicated them already.

Which means

**Version number:** 5.1.2h

**bundleid:** 5.1.2h

**MCC:** 5.1.2h

Can you give us feedback, that you received everything well? And inform us about the process?

Hope to hear from you,

We apologize for the inconvenience.

Regards,

5.1.2e

Onderwerp: new public key for Test environment

Hi 5.1.2e

We deliver here the public key for the test environment that we want to add to the existing Test environment.

It is in the attachment.

We do this because we are going to start to use the new HSM which uses a new private key / public key combination.

The pub key is in the Zip file.

The Zip file contains also a bin and sigfile for testing purposes.

The following parameters need to be connected to it.

**Version number:** 5.1.2h

**bundleid:** 5.1.2h

MCC-5.1.2h

We find it important that version number v10 also keeps working. So that we have a smooth migration.

Can you give us feedback, that you received everything well? And inform us about the process?

Hope to hear from you,

Regards,
