Hi both,

Hope you are well.
This summer we had contact about performing quality of life studies among COVID patients.

After some delays I/we hope to get at least a prospective quality of life study of the ground. Where we aim to include people when they are tested, and follow them up. This way we get both positives and negatives.

To do so I have a very pragmatic question about the EQ-5D for you both: what is your arrangement with EuroQol? Do you pay (how much)? And did/do you get a digital version? And which software do/did you use?

Another question: do you also perform quality of life studies on the general public to assess the impact of lock down/other measures? As I think this is a good idea too.

Best wishes,
5.1.2e
