[proposal scenario analysis 20201216.docx](#)

H[5.1.2e] [5.1.2e]

Monday the ministry asked if we could do scenario analyses using our simulation model to allow them to gain insight into the dynamics of the trade-off between vaccination and testing and non-pharmaceutical measures. The idea they have is that when we succeed in vaccinating high risk individuals, we should be able to relax some measures; or alternatively, that the objective of protecting the vulnerable population and the objective of opening up society can be achieved at the same time.

They would like something short and simple

What I have promised is a first set-up for a scenario analysis, that we could email to them on Friday.

Question to you:

1 does this make sense, is it a coherent argument?

2 Can we discuss it this afternoon? (Apologies for the very short time frame).

Best

[5.1.2e]
