Update from Scientific evidence:

There have been few cases of re-infection with SARS-CoV-2 documented. Data on three confirmed cases from [Hong Kong](#), [the United States](#) and [Belgium](#) have now become available in scientific publications. This information is limited, but highlights the importance of standard reporting of the epidemiological, clinical and immune response characteristics of re-infected patients, as well as the genomic profile of the SARS-CoV-2 strains causing the different infection incidents.

Public Health Emergency of International Concern (PHEIC):

On 30 January 2020, the World Health Organization declared that the outbreak of COVID-19 constitutes a PHEIC. On 11 March 2020, the Director-General of the [WHO](#) declared the COVID-19 outbreak a pandemic. The [third](#) and [fourth](#) International Health Regulations (IHR) Emergency Committee meeting for COVID-19 were held in Geneva on 30 April and 31 July 2020, respectively. The committee concluded during both meetings that the COVID-19 pandemic continues to constitute a PHEIC.

Assessment: For the last available risk assessment, please visit [ECDC dedicated webpage](#).

Actions: ECDC has published the eleventh update of its [rapid risk assessment](#). A [dashboard](#) with the latest updates is available on ECDC's website.
