Hi (10)(2e) and Co

What do you think if we:

1) include WP to make a freely accessible database and website summarizing all available and emerging options to control SARS-CoV-2 infections.;

2) merge our efforts to identify most effective drug against SARS-CoV-2 infections.

This would allow us not to repeat previous or make our products better.

I made some changes in the draft, which is attached.

WBR

Thank you (10)(2e),
I will start reading now. Will send my part by end of Sunday.

And thank you all for your efforts, let's do this!!

budget-proposal-IMI-150320.xlsx

Good morning!

Here is finally the draft for our IMI-application, and a budget proposal. My apologies for being late on this, (10)(1d) (10)(1d)

Please send your additions and comments latest on Monday 23.3.2020.

I am attaching both a OneDrive-version and a regular version, hopefully you can use the OneDrive-version and we can see changes in real-time, remember to check your settings for sharing!

All new partners, add yourself to the list of partners, and add your contributions to the work packages or write a new work package (there is an empty template in the draft that you can use).

Everyone, please check the section excellence that should include the **methodology** and our approaches. Please add **your other related projects, deliverables, risks and how to manage them**. We also need to formulate a better business plan, but I will get back to that later.

Finally, I will soon also send the section 4-6 with partner descriptions to be updated. I will also work with our financial officers to sort out how we should include the business partners, and while waiting for your contributions, I am working on all the common sections of the draft.

best wishes,
(10)(2e)
