Santé Overview

Formerly Unispace Health

Current global issues have reinforced the essentiality of robust strategies to mitigate the risk to business operation. Santé has partnered with organisations globally to assist governments, the corporate sector and health systems gain access to leading edge technologies and products to facilitate business continuity.

This effort has seen us become the largest supplier to the US Department of Defence, Britain's Department of Health and Social Care, a large supplier to NSW Healthshare, and the Australian Defence force, among many other clients. Our global reach has enabled us to rapidly deploy resources to secure supply lines, whilst leveraging buying power to bring quality and quantity to our clients.

As a trusted partner in the provision of clinical diagnostic results, overtime we have carefully selected a network of global supply partners, who share our vision of superb quality, effective and well proven products. Their knowledge and experience in the clinical diagnostics industry alongside our focused approach to global supply and product validation has enabled us to support laboratories all around the world - giving you the quality assurance and certainty you deserve among these times of challenge.

Our adaptable approach means we can deliver efficient recovery solutions in the event of unprecedented challenges. We offer additional business continuity support so our clients have the ability to continue operations. From the outset, we initiated a stringent process for the validation of suppliers to ensure that our clients and ourselves were not subjected to unknown risk and potential fraud.

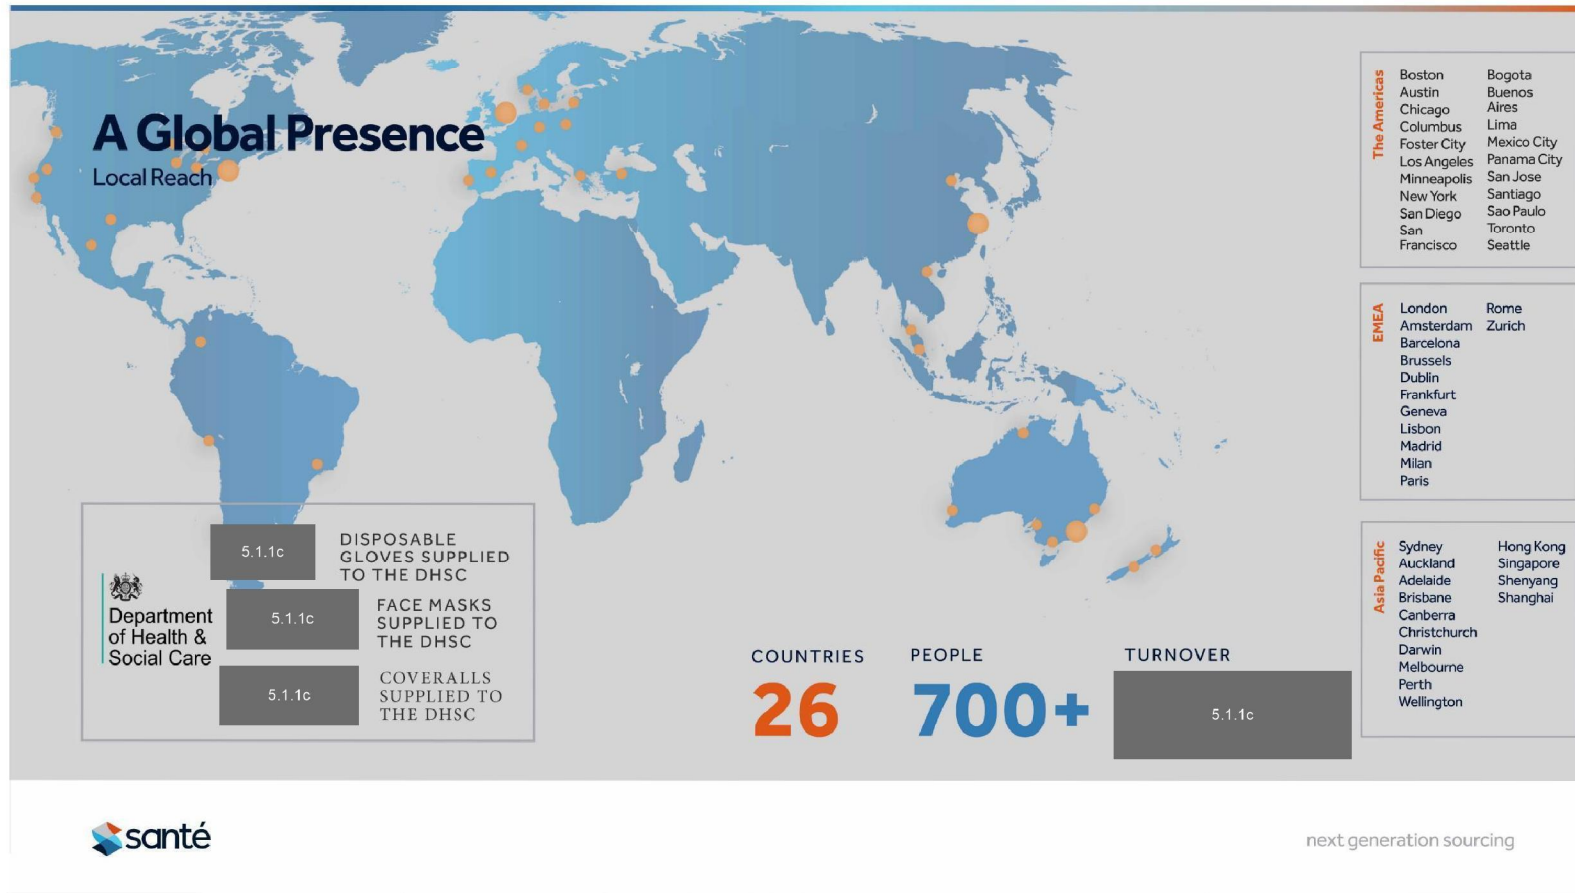

We look forward to supporting the great work you are doing globally.

Kind regards,
Directors, Santé Global
