

### ECDC Introduction

The table below includes in column C the requested information on the 14-day notification rate of new cases per 100 000 inhabitants and in column D the trend in this rate, as defined in next worksheet. This table should be used in the context of the overall principle expressed in the 10th ECDC Rapid Risk Assessment

(<https://www.ecdc.europa.eu/sites/default/files/documents/RRA-COVID19-update10-2020-06-11.pdf>), i.e. that available evidence does not support recommending border closures as an effective measure to prevent a large upsurge of COVID-19. It is essential that, while allowing people to move within or between countries, measures (such as keeping physical distance, using face cover/mask as a source control if this is not possible, thorough hand hygiene, cough etiquette, staying home when respiratory symptoms, etc.) should be in place to minimise the risk of infection.

The 14-day notification rates for COVID-19 are not directly comparable between countries due to differences in testing policies, testing capacity and surveillance systems at national level.

ECDC therefore does not recommend using notification rates for comparison between

Country	14-day	14-day	Trend based on	Duration of trend (days)
	notification rate as of 2021-02-07	notification rate as of 2021-02-14	14-day notification rate as of 2021-02-14
