

The image shows the exterior of the European Centre for Disease Prevention (ECDC) building, a modern structure with large windows and a glass roof section. Several flags are flying in front of the building, including the European Union flag and the ECDC flag. The ECDC logo is visible in the top right corner of the image area.

COVID-19 data completeness in TESSy, up to week 37

Health Security Committee, 17 September 2020

Completeness of TESSy data, up to week 37

One plot per Member State, each with four panels:

1. Reporting completeness

comparing weekly numbers of cases/deaths in case-based/aggregate record types against 'official' totals for the country, identified by ECDC epidemic intelligence

2. Variable completeness for selected variables in case-based data

% of records for that variable that are NOT coded as UNK or missing

3. Variable completeness for selected *date* variables in case-based data

% of records for that variable that are NOT coded as UNK or missing, among different subsets of the data (e.g. date of hospitalisation among hospitalised cases only)

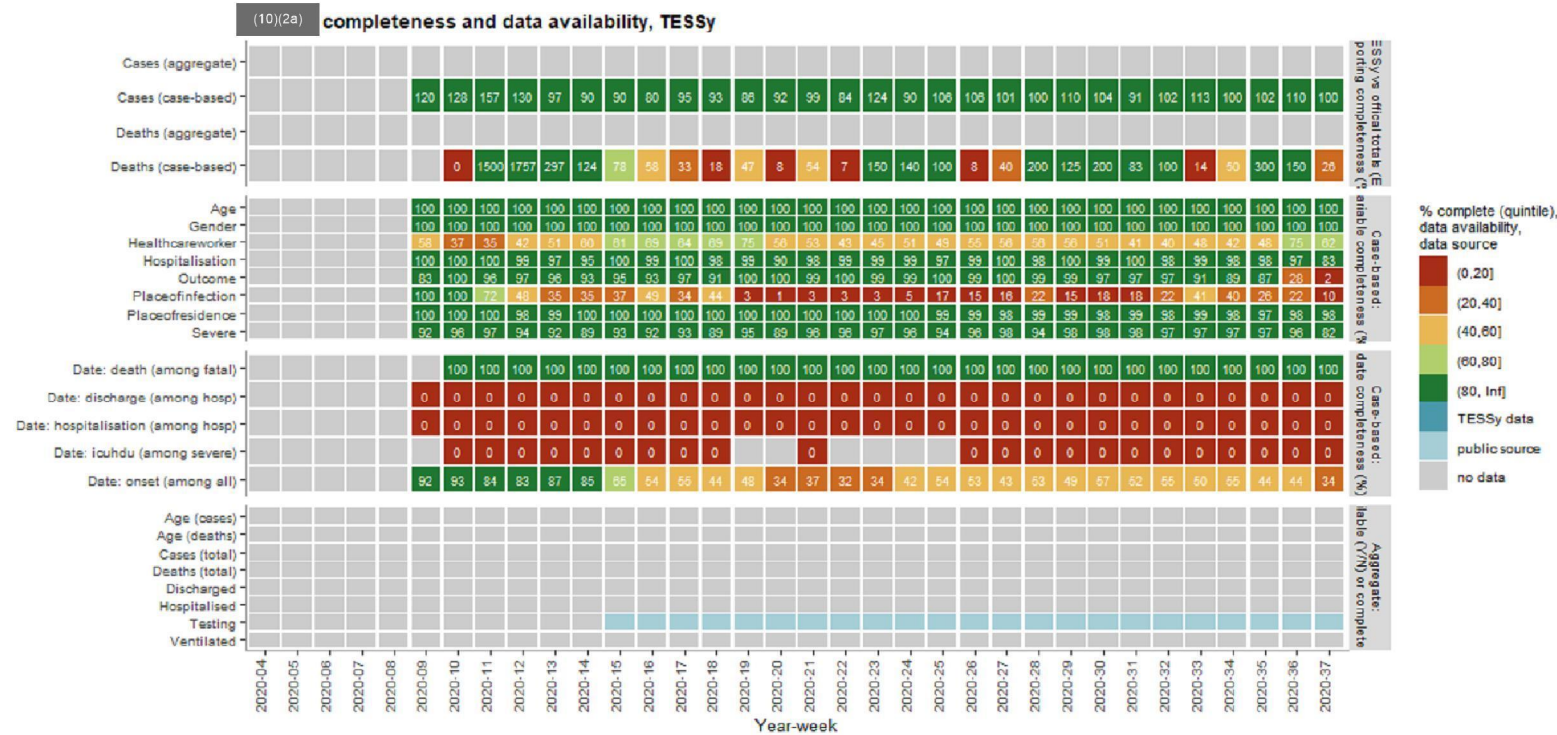

4. Aggregate data - whether or not data are reported per variable

% completeness of age breakdowns for cases and deaths.

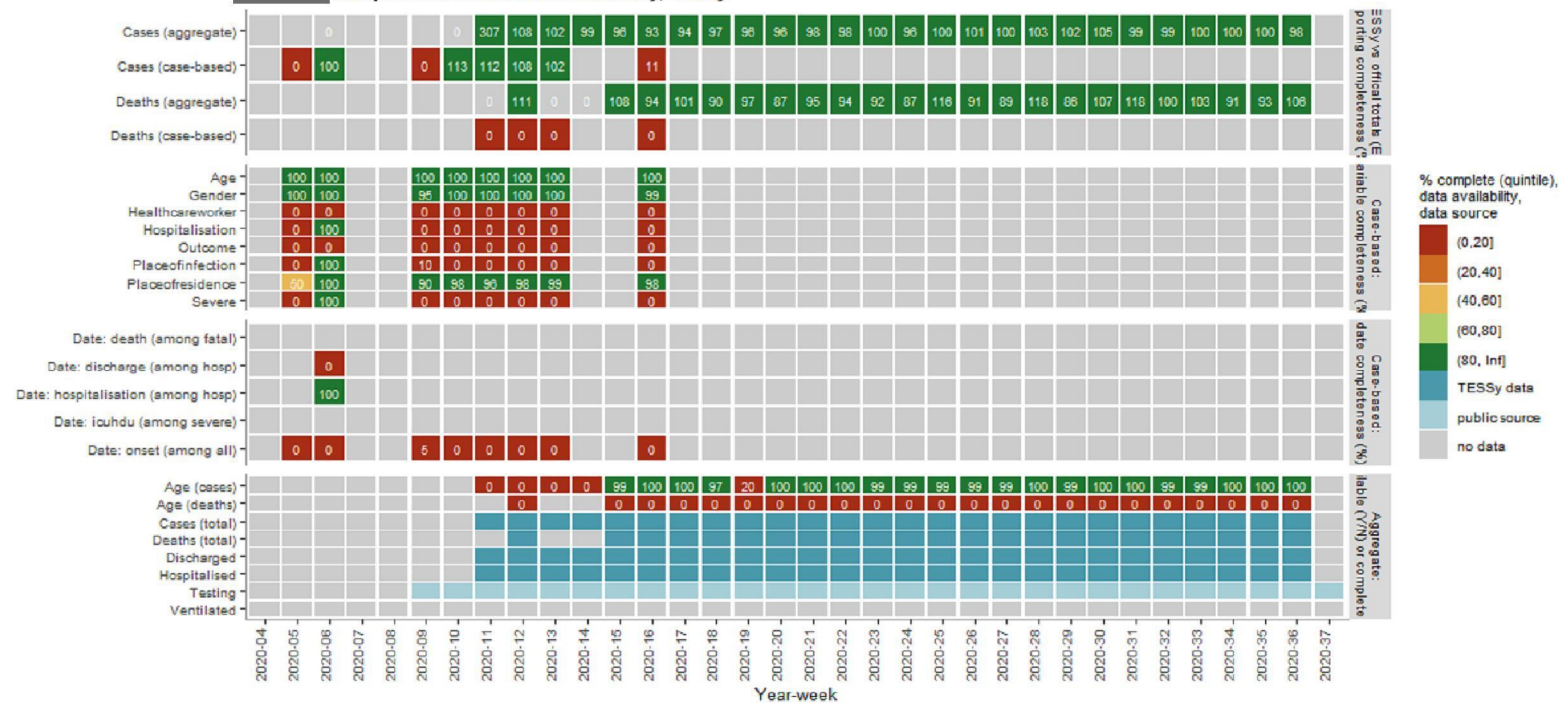

For testing, the source of data available collected by ECDC (TESSy or data extracted from websites) is shown.

All numbers shown on the squares relate to the % completeness of that variable for that week.
