

# GHSA: The Way Forward

GHSA is an alliance of countries striving towards a mutual goal involving multiple sectors. The goal is to enable countries and create accountability to **prevent, detect, and respond to infectious disease threats**.

GHSA initiates actionable commitments and thereby accelerates world safety and security from infectious disease threats, whether **naturally occurring, accidental or deliberately released**.

The GHSA alliance brings together **countries, international organizations, and non-governmental stakeholders (including the private sector)** related to global health security.

Together they seek to enable countries to work according to relevant frameworks supporting global health security such as:

- the World Health Organization (WHO) International Health Regulations (IHR);
- the World Organization for Animal Health (OIE) international standards and guidelines;
- United Nations Security Council Resolution 1540;
- the Biological Weapons Convention.

**Concrete Example:**

Members working together in the Action Package Biosafety and Biosecurity vowed in a mutual Statement to:

- Encourage countries and regional organizations to develop standardized testing guidance that would detail how, where, and under what conditions pathogens (or component parts thereof) can be safely and securely synthesized to accelerate research on medical measures and detection tools to beat COVID-19 and other global public health emergencies.

**The GHSA vision is to:**

- prevent or decrease the impact of naturally occurring outbreaks and accidental or intentional releases of dangerous pathogens worldwide;
- quickly detect and report outbreaks in clear language when they come about;
- bring an interconnected global network into play to take measures to limit the spread of infectious disease outbreaks in humans and animals;
- decrease human suffering and number of deaths;
- reduce economic impact.

**The GHSA work partners' mission is to:**

- stress global health security as a national leaders-level priority and urge high-level commitments to global health security;
- better enable countries to prevent, detect, and respond to infectious diseases;
- promote the engagement of multiple sectors and collaboration;
- focus on common, mutually agreed-upon measurable targets.
