Subject: Re: Latebreaker abstract for ESWI: association between influenza vaccination and COVID-19

Dear RIVM and Nivel colleagues,

Many thanks again for your very useful and important comments on the ESWI abstract.

We included the vast majority of your comments in the revised abstract (attached), including your comments on the title and the introduction.

In the methods, we included most of your comments, except

- We did not mention the swabbing type (nose and/or throat). While this is important, we had to omit due to word count

(10)(2g)

In the discussion section we tried to include as many of your comments as possible, but we were hampered also by the word count (we are at the limit).

We hope the abstract as it is now is acceptable to you.

And many thanks for your comments, they have made the abstract much better.

Wishing you all the best,

[REDACTED]
