

I am happy to share this draft manuscript with you. It uses the results from our first set of measles serology data in a mathematical model to predict the likelihood of a measles outbreak given the COVID19 disruptions to routine immunization and campaigns. [REDACTED] my PhD student co-supervised with [REDACTED] and [REDACTED] has done the heavy lifting of running the models underpinning the results presented here whilst working closely with the modelling group at the LSHTM.

The author list includes all those who have contributed to this through data generation, assay development/optimization/transfer, fieldwork, etc. Please let me know if you are happy to be 1) included in the list of authors 2) are satisfied with order as currently proposed and 3) if there are others I have omitted inadvertently. Kindly review the acknowledgement section to confirm our funding sources have been included, etc.

The target journal is Lancet Global Health and we aim for submission on mid next week. So, we will appreciate your feedback latest Monday 17th August .

Thank you for your collaboration.

Warm regards

[REDACTED]
