[Spoedonderzoek Brabant voor intern gebruik.pdf](#)

Hoi,

Net (10)(2e) gesproken. Wat (10)(2e) net aangaf wat we door kunnen geven aan ECDC had ECDC zelf al vertaald van onze website (zie hieronder). Dat zou dan voldoende moeten zijn.

Communicatie wordt platgebeld door journalisten die het rapport ook willen hebben desnoods via WOB.

Bijgevoegd nogmaals het eindrapport. Precieze details over deze mw kunnen via Ffx

Gr (10)(2e)

Dear all,

Nearly four per cent of the hospital staff examined in Brabant is infected with the novel coronavirus (COVID-19). A random sample by RIVM National Institute for Public Health and the Environment between 6 and 9 March reveals this.

Test results

From 6 to 8 March 1097 hospital workers were tested of which 3.9 per cent was indeed infected with COVID-19. The percentages vary per hospital and are between 0 and 10 per cent. Two hundred patients were also tested. Of these patients, an average of 9 per cent was infected with the virus. Again, there are differences between hospitals. The people who were tested already had symptoms.

Hospitals

RIVM carried out this research in close collaboration with the hospitals in the province: (10)(2e)

(10)(2e)

ous transmittal.
