Corona exit and vaccines

Considerations regarding our governance

28th of May

Context

- We can not let the virus spread, nor isolate
- We need to continue focus on developing treatment, but they might fail or don't work
- So therefore, also prepare on vaccines
- But all vaccines might fail, so it remains risky
- Or medicines might succeed, making vaccines less needed
- Or the virus might mutate, so yearly vaccines
- We need to continue to prepare / safeguard vaccines but we need to realize the risk

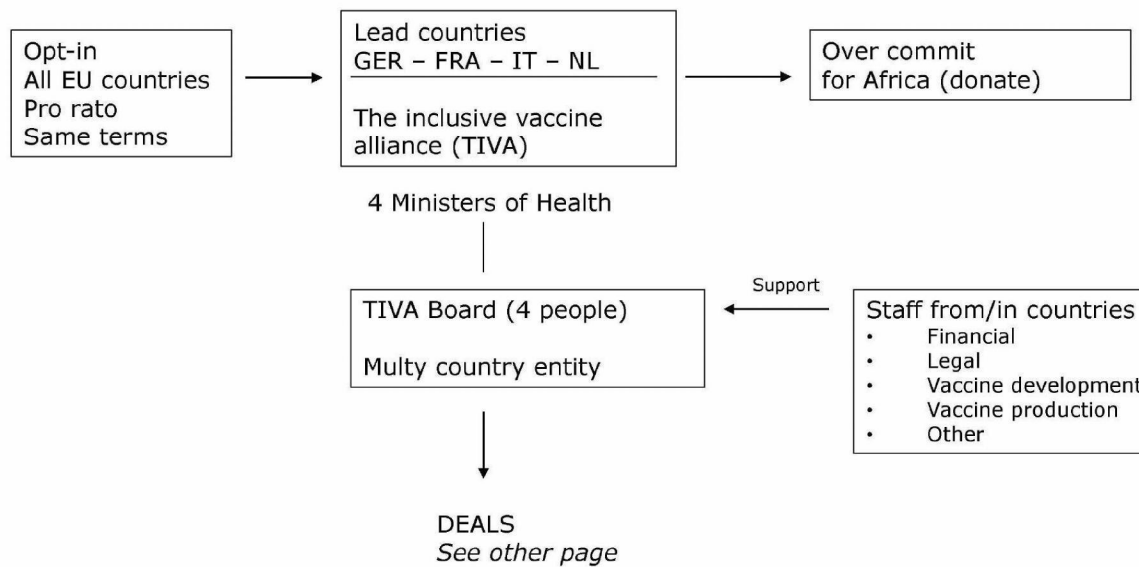

International developments

- USA, UK, China, perhaps Japan, India etc made deals with vaccine developers / manufacturers to safeguard vaccines
- EU did not safeguard yet and should
- Because of urgency and tempo: EU lead country group with an opt-in option

How to safeguard vaccines in the EU?

TIVA board

Complex but doable
