Dear [redacted]

Hope you are well and still able to focus on all these different CoMix surveys you are working on at the same time – it must be a lot of work! Attached you can find the adjustments we made to the BE survey questions in English. A brief update on the major suggestions:

- We have added two questions on vulnerable contacts (p.33 & p.43)
- We would like to incorporate the questions on vaccination as was discussed with the meeting on the UK survey, but keep them hidden until vaccination in the NL starts.
- In terms of the standard demographic questions Income/Occupation: I realize you mentioned it would be challenging to incorporate the answer options as recommended by the Dutch Central Bureau of Statistics but we would still prefer to check if they could be adjusted because they don't really fit the Dutch average income scales. Since we don't have many other changes to the survey we could incorporate the demographics into the max 15% changes. What do you think?

Could you incorporate the changes into the Dutch translated version and let us know what steps are next? We also realize that the time before the Holidays is running out but ideally we would still like to be able to compare contact patterns before/during/after the Holidays. I was therefore wondering if you could give us a timeline on when we could launch the survey and of course hoping that we could aim for it to go out as soon as possible.

For the invoicing details – I have requested for the PO number to be generated and will share the number with you as soon as possible. All is running smoothly so far!

Let me know if you have any questions.

**Warm regards,**
